

Knight Soul of the Community 2010

Why People Love Where They Live and Why It Matters: A National Perspective

Knight Communities
OVERALL

At the Knight Foundation, our mission is to create more informed and engaged communities. We emphasize transformational projects. The Soul of the Community project reflects this mission. This study offers leaders a radically new way to think about their community and invites creative approaches for improvement. The report, based on interviews with residents in 26 Knight communities, proves that a significant connection exists between residents' levels of emotional attachment to their community and its economic growth. It presents surprising and nearly universal findings about why people form lasting emotional bonds to where they live.

We hope these discoveries inspire renewed engagement in all residents and create lasting, positive change.

INTRODUCTION

On behalf of the John S. and James L. Knight Foundation and Gallup, we are pleased to present the third annual Soul of the Community report. This study was conducted over three years in 26 cities across the United States where Knight Foundation is active. It was designed to find out what emotionally attaches people to a community — what makes them want to put down roots and build a life there.

In today's challenging economic climate, community leaders are seeking new ways to attract and retain people, develop prosperous economies, add intellectual capital, and create jobs. This report provides a fresh perspective about the current driving factors of passion and loyalty in a community. Most importantly, it represents the voice of the residents themselves. Gallup gathered insights from nearly 43,000 individuals, and the resulting picture will help community leaders to answer important questions such as: What makes residents love where they live? What draws people to a place and keeps them there?

The study provides empirical evidence that the drivers that create emotional bonds between people and their community are consistent in virtually every city and can be reduced to just a few categories. Interestingly, the usual suspects — jobs, the economy, and safety — are not among the top drivers. Rather, people consistently give higher ratings for elements that relate directly to their daily quality of life: an area's physical beauty, opportunities for socializing, and a community's openness to all people.

Remarkably, the study also showed that the communities with the highest levels of attachment had the highest rates of gross domestic product growth. Discoveries like these open numerous possibilities for leaders from all sectors to inform their decisions and policies with concrete data about what generates community *and* economic benefits.

This report is not meant to be prescriptive, but rather to inform and engage leaders in new thinking and action. We hope you will read it, share it, and discuss with others what it might mean for the future of communities across our country. Our hope is that this leads to new conversations and partnerships, and new ways for all of us to work together to increase people's attachment, to strengthen our cities, and to ensure a brighter future for all people and communities.

COMMUNITY ATTACHMENT:

AN EMOTIONAL CONNECTION

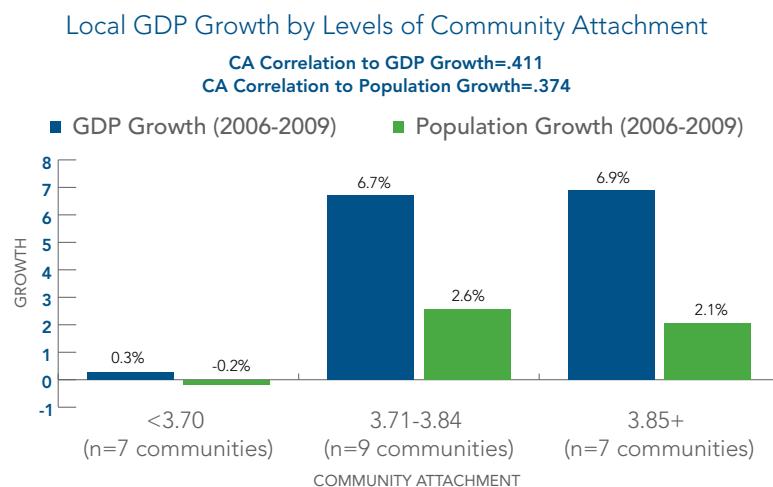

Community attachment is an emotional connection to a place that transcends satisfaction, loyalty, and even passion. A community's most attached residents have strong pride in it, a positive outlook on the community's future, and a sense that it is the perfect place for them.

They are less likely to want to leave than residents without this emotional connection. They feel a bond to their community that is stronger than just being happy about where they live.

Why Attachment Matters

Over the past three years, the Soul of the Community study has found a positive correlation between community attachment and local GDP growth. Across the 26 Knight communities, those whose residents were more attached saw more local GDP growth. This is a key metric in assessing community success because local GDP growth not only measures a community's economic success, but also its ability to grow and meet residents' needs.

GDP and population growth figures available for 23 of the 26 communities.

Gallup research proving the link between employee engagement in a workplace to business outcomes such as productivity, profitability, and employee retention helps to underscore why emotional attachment matters. Just as actively engaged employees are more productive and committed to the success of their organizations, highly attached residents are more likely to actively contribute to a community's growth.

The Relationship to Community Outcomes

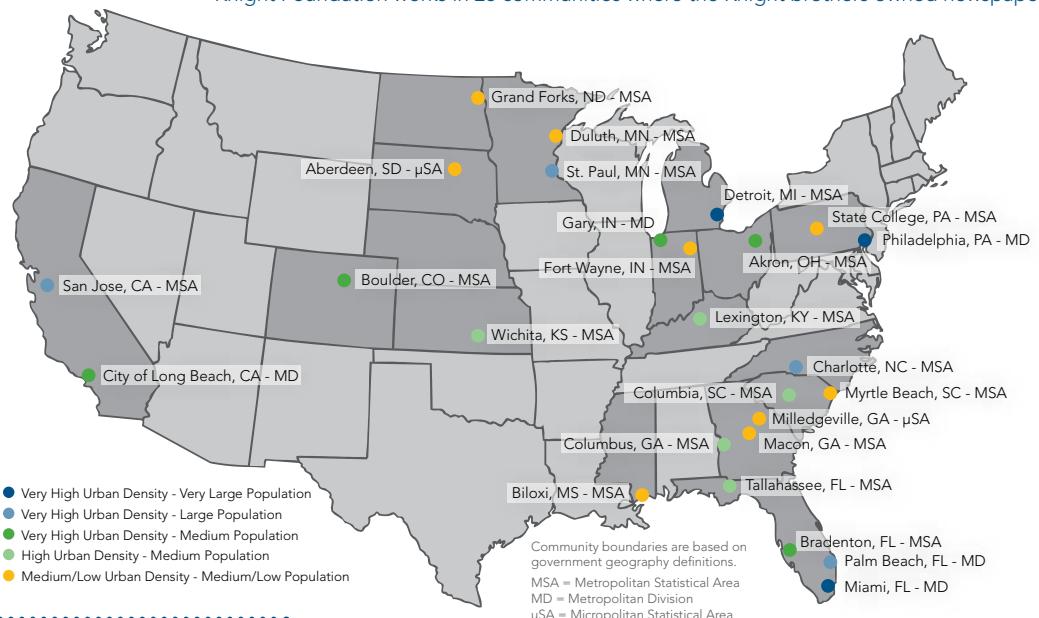

Precisely how community attachment affects community outcomes is at best a scientific guess at this point. However, the data make clear that highly attached residents are more likely to want to stay in their current communities. When this is true for college graduates and other productive residents, it increases the number of talented, highly educated workers striving to positively affect economic growth.

Highly attached residents are also more likely to see their communities as being open to many kinds of people, including talented, young college graduates and families with young children. Communities that are more open to diversity are better able to compete for talent.

Attachment is also higher when residents agree that their communities provide the social offerings and aesthetics they enjoy. When residents enjoy their community's offerings, they are more likely to spend their money on local activities and businesses, directly benefiting the local economy.

Knight Foundation works in 26 communities where the Knight brothers owned newspapers.

Highly attached residents are more likely to see their communities as being open to many kinds of people.

How Gallup Found the Factors With the Strongest Links to Attachment

To find out what drives attachment, Gallup asked residents five questions examining their level of attachment to their community and then asked them to rate various aspects of the community such as basic services, the local economy, social offerings, and openness.

Gallup then analyzed the relationship between the overall level of community attachment and residents' perceptions of aspects of the community itself to reveal the strongest links. The greater the correlation between attachment and a given factor, the stronger the link. Using this analysis, Gallup ranked the aspects of communities that have the strongest links to attachment, understanding that even small differences can be very meaningful.

Community Attribute	Correlation to Attachment*		
	2008	2009	2010
Social Offerings	0.49	0.52	0.54
Openness	0.53	0.52	0.50
Aesthetics	0.51	0.50	0.49
Education	0.47	0.44	0.47
Basic Services	0.41	0.34	0.42
Leadership	0.41	0.40	0.39
Economy	0.41	0.39	0.36
Safety	0.22	0.19	0.23
Social Capital	0.14	0.16	0.15
Civic Involvement	0.06	0.04	0.04

*The higher the correlation, the more closely the attribute is related to attachment.

What Matters Most

What attaches residents to their communities doesn't change much from place to place. While one might expect the drivers of attachment would be different in Miami from those in Macon, Ga., in fact the main drivers of attachment differ little across communities. Whether you live in San Jose, Calif., or State College, Pa., the things that connect you to your community are generally the same.

When examining each factor in the study and its relationship to attachment, the same items rise to the top, year after year:

- **Social Offerings** — Places for people to meet each other and the feeling that people in the community care about each other
- **Openness** — How welcoming the community is to different types of people, including families with young children, minorities, and talented college graduates
- **Aesthetics** — The physical beauty of the community including the availability of parks and green spaces

**Key Drivers of Attachment
in 2010**

Knight Community	Attribute Rank in 2010		
Overall	1	2	3

Aberdeen, SD	1	3	2
Akron, OH	1	3	1
Biloxi, MS	1	3	2
Boulder, CO	1	3	1
Bradenton, FL	1	3	1
Charlotte, NC	1	3	1
Columbia, SC	1	2	2
Columbus, GA	1	2	2
Detroit, MI	1	2	4
Duluth, MN	1	3	2
Fort Wayne, IN	1	3	2
Gary, IN	1	3	1
Grand Forks, ND	1	3	2
Lexington, KY	1	2	2
City of Long Beach, CA	1	3	1
Macon, GA	1	3	2
Miami, FL	1	2	4
Milledgeville, GA	1	3	2
Myrtle Beach, SC	1	3	2
Palm Beach, FL	1	3	2
Philadelphia, PA	1	2	4
San Jose, CA	1	3	2
St. Paul, MN	1	3	2
State College, PA	1	3	2
Tallahassee, FL	1	2	2
Wichita, KS	1	2	2

While the study also measures perceptions of the local economy and basic services, these three factors are always more important in terms of their relationship to community attachment. This is not to say that communities should focus on building parks when jobs aren't available. However, it does make it clear that these other factors, beyond basic needs, should be included when thinking about economic growth and development. These seemingly softer needs have an even larger effect than previously thought when it comes to residents' attachment to their communities.

Generally, demographics are not the strongest drivers of attachment. In almost every community Gallup studied, attachment is more strongly related to certain perceptions of the community than to residents' age, race, income, or other demographic characteristics. In other words, whether a resident is young or old, wealthy or poor, or black, white, or Hispanic matters less than his or her perceptions of the community. This reality gives community leaders a powerful tool to influence residents' attachment to the community, no matter who they are.

Key Community Attributes

SOCIAL OFFERINGS INCLUDES PERCEPTIONS OF:

- Vibrant nightlife
- Good place to meet people
- Other people care about each other
- Availability of arts and cultural opportunities*
- Availability of social community events*

OPENNESS INCLUDES PERCEPTIONS OF:

- Good place for older people
- Good place for racial and ethnic minorities
- Good place for families with young children
- Good place for gays and lesbians
- Good place for young, talented college graduates looking for work
- Good place for immigrants
- Good place for young adults without children*

AESTHETICS INCLUDES PERCEPTIONS OF:

- Availability of parks, playgrounds, and trails
- Beauty or physical setting

*New in 2010. Not included in overall attribute score to allow for trending to previous years.

OVERALL FINDINGS

OVERALL ATTACHMENT

Residents of the Knight communities have expressed a comparable level of overall attachment to their communities in each year of the study. The 2010 mean score of 3.57 out of a possible 5.00 compares with a score of 3.58 in 2009 and 3.56 in 2008. Results reflect surveys conducted in the 26 Knight communities.

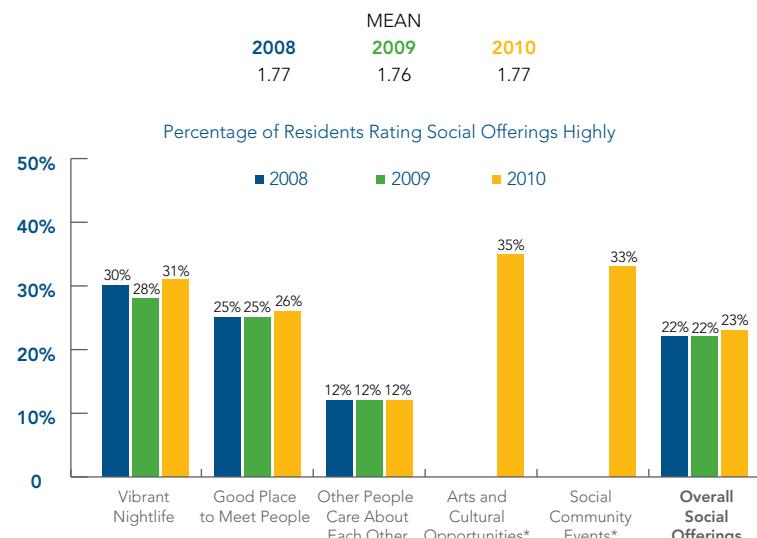

For detailed data, visit www.soulofthecommunity.org.

KEY DRIVERS OF ATTACHMENT

The surveyed communities' social offerings, openness, aesthetics, and education are, in that order, most likely to influence residents' attachment to their communities in 2010. Generally, these factors have been in the top four each year of the study.

- Social Offerings:** Residents rate their communities' availability of arts and cultural opportunities and social community events highest among social offerings. These are both aspects Gallup asked about for the first time this year. Residents are more positive this year about their communities' vibrant nightlife, with 3 in 10 rating it positively. They are more negative than positive about whether their communities are good places to meet people, with about 4 in 10 rating this aspect negatively. They have become more negative about their communities as places where people care about each other, with slightly more than 1 in 10 rating this positively.

Social Offerings

To see a list of all drivers, turn to page 20.

- Openness:** Residents' overall ratings of their communities' openness in 2010 is on par with results in 2009 and 2008. About one-quarter say their communities are good places for older people, families with young children, young adults without children, and racial and ethnic minorities. Residents are relatively more negative about whether their communities are good places for immigrants and gays and lesbians. However, residents are more likely in 2010 to say their communities are welcoming to gays and lesbians than they were to say so in 2009. They are most negative about whether their communities are good places for talented college graduates looking for work. Almost two-thirds say their communities are not good places for talented college graduates, and these views have grown more negative since last year.

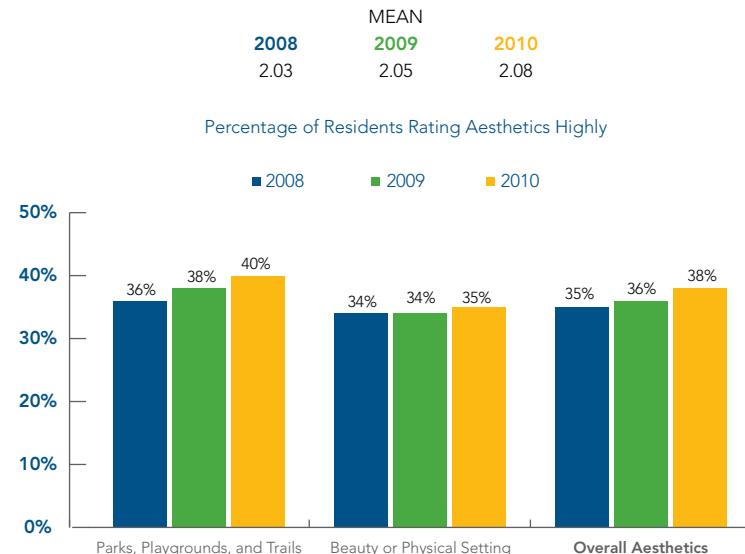

Openness

*New in 2010. Not included in domain score to allow trending.

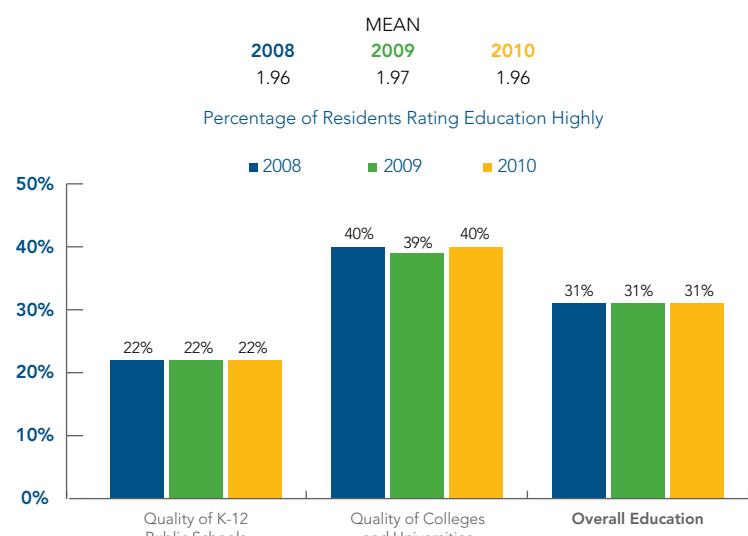

- Aesthetics:** Residents generally give their communities high marks for aesthetics, and they gave their best ratings this year. Four in 10 residents rate the availability of parks, playgrounds, and trails in their communities positively. They are slightly less positive about the beauty or physical setting of their communities, with more than one-third giving positive ratings.

Aesthetics

- Education:** Education tends to be one of the higher rated key attachment drivers in the Knight communities, with residents almost always rating the quality of colleges and universities higher than the quality of K-12 public schools. Four in 10 residents give their local colleges and universities high ratings, on par with last year. But less than one-quarter of residents rate the quality of their communities' K-12 public schools highly. Nearly half rate their K-12 public schools poorly, and these views have only become more negative since last year.

Education

Summary Table of Strengths and Opportunities

The vertical axis shows the strength of relationship to attachment based on average level of correlation between the item and attachment. The stronger the relationship, the higher the item on the chart. The horizontal axis shows how well the communities are performing on the item, as rated by respondents. Items farther to the right have better performance.

WHO IS MOST ATTACHED

While demographic characteristics do not have as much effect on attachment as residents' perceptions of their communities, patterns do emerge among various groups.

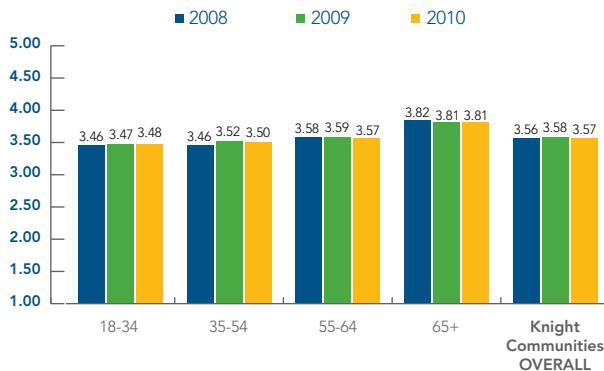

- **Geography:** Residents who live within the city limits of their communities tend to have similar attachment to those who live outside the city.

Community Attachment by Geography

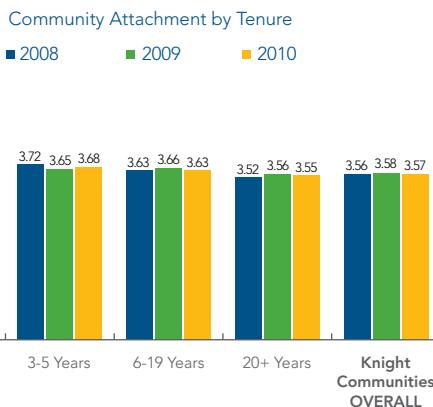

- **Age:** Attachment tends to increase with age. Residents aged 65 and older have the highest attachment scores, on average.

Community Attachment by Age

- Community Tenure:** Residents who have lived in the Knight communities for three to five years tend to be the most attached. However, the newest arrivals tend to be the least attached.

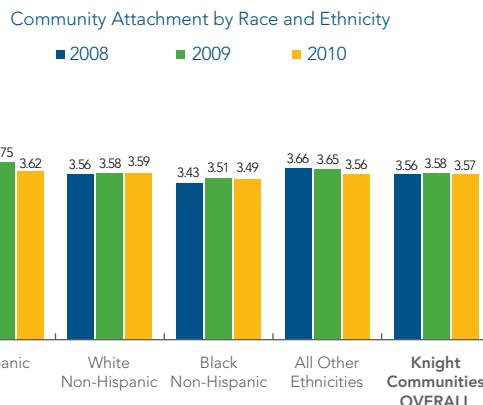

- Income:** Attachment tends to increase with income. Knight community residents with annual household incomes of \$75,000 or more tend to be the most attached.

Community Attachment by Annual Household Income

- Race and Ethnicity:** Attachment levels are similar between Hispanics and non-Hispanic whites. However, blacks tend to be less attached than both of these groups.

IMPLICATIONS FOR THE KNIGHT COMMUNITIES

The implications below reflect the findings from 26 Knight communities, which vary in size and demographics. However, what we learned about the universal importance of three factors — social offerings, openness, and aesthetics — is valuable to leaders anywhere who seek fresh perspectives to improve their communities.

STRENGTHS TO LEVERAGE

Residents surveyed continue to be proud of their communities' **parks, playgrounds, and trails**. The Knight communities should continue to maintain and promote these offerings, so that even greater numbers of residents feel positively about them. Doing so by way of social offerings that promote diversity could also help communities improve on several dimensions, maximizing the gains for community attachment overall.

Residents continue to give high ratings for their communities' **colleges and universities**. The communities should continue to promote higher education offerings among a broader audience and perhaps use these positive perceptions to improve education at the elementary and secondary levels. Doing so could also help communities to attract and retain young adults and families with young children.

Social offerings are an overall positive for the Knight communities, with residents particularly positive about the availability of arts and cultural opportunities and social community events. Further investment in these areas of clear value to residents will help the communities to achieve higher levels of attachment.

OPPORTUNITIES TO PRIORITIZE

Residents' mixed responses about their communities' **openness** could be inhibiting their desires to stay in their community and to recommend it to others. Active and visible efforts to promote tolerance and diversity within the communities could improve the perception that the communities are welcoming places for all groups, which will also help to attract a larger cross section of individuals to the communities.

Because the Knight communities also tend to struggle with the perception that **people in the community care about each other**, events that bring people together to foster more interaction and understanding are likely to have a compounding effect on community attachment.

Leaders also have much to gain by improving perceptions of the quality of **K-12 education** in their communities. Not only will this increase attachment overall, but a more positive view of public schools can also help attract families that will help raise the next generation of talent in the communities.

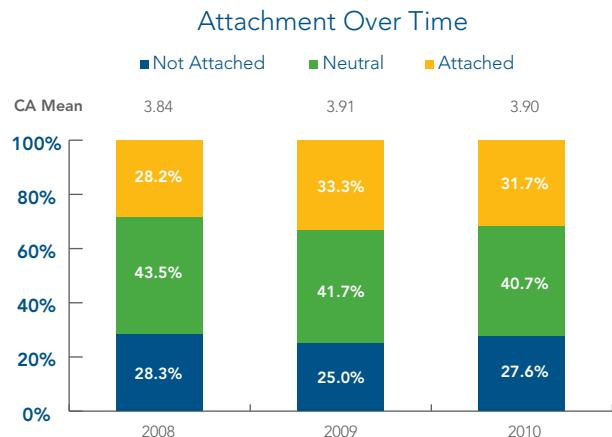

SNAPSHOTS OF THE KNIGHT COMMUNITIES

METHODOLOGY

The Gallup study is a 15-minute phone survey conducted in the 26 communities the John S. and James L. Knight Foundation serves. The survey is available in English and Spanish, and both landlines and cell phones are called.

Each year, a random sample of at least 400 residents, aged 18 and older, is interviewed in each community, with additional interviews conducted in selected resident communities. In 2010, 15,200 interviews were conducted, with 1,000 conducted in eight resident communities. The 2010 study also included 200 interviews among residents aged 18 to 34 in the resident communities to give Gallup more information about that age group. Overall data were adjusted to ensure an accurate representation of the real demographic makeup of each community based on U.S. Census Bureau data.

Gallup also used U.S. Census classifications to choose the geographical area included in each community. For the most part, Gallup used the Metropolitan Statistical Area. However, in a few cases, Gallup used other accepted definitions of the community area. These census definitions allow Gallup to compare other information such as local GDP and population growth so that Gallup can more closely examine community attachment and key community outcomes.

About the John S. and James L. Knight Foundation

The John S. and James L. Knight Foundation advances journalism in the digital age and invests in the vitality of communities where the Knight brothers owned newspapers. Knight Foundation focuses on projects that promote informed and engaged communities and lead to transformational change. For more, visit www.knightfoundation.org
